

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A swing comprising:
a swing frame including first and second housings;
a seat;
first and second hanger arms that connect the seat to the swing frame; and
~~two~~ first and second swing handles rotationally coupled to ~~the swing frame~~ the first
and second housings, respectively, and to the first and second hanger arms, respectively, such
that each swing handle may rotate about a respective handle rotational axis between at least
two positions, each of the swing handles having a hand grip portion.
2. (Currently Amended) The child swing according to claim 1, wherein the swing
frame is an open top swing frame having ~~two~~ first and second opposing handle support
structures associated with the first and second housings, respectively, and wherein each of the
swing handles is rotationally coupled to a respective one of the opposing handle support
structures.
3. (Canceled)
4. (Currently Amended) ~~The child swing according to claim 3~~ A swing
comprising:
a swing frame; and
two swing handles rotationally coupled to the swing frame such that each swing
handle may rotate about a respective handle rotational axis between at least two positions,
each of the swing handles having a hand grip portion,
wherein one of each swing handle and each respective handle support structure
includes a protrusion, and the other of ~~the~~ each swing handle and each respective handle
support structure includes a recess matched to the protrusion such that, when the protrusion is

within the recess, the swing handle is locked to prevent rotation relative to the respective handle support structure.

5. (Currently Amended) The child swing according to ~~claim 3~~ claim 2, wherein each of the swing handles comprises a support interface portion attached to ~~a respective~~ the respective handle support structure.

6. (Currently Amended) The swing of claim 1, wherein the swing frame includes first and second legs, ~~and first and second housings~~, wherein the first and second ~~rear~~ legs are pivotally connected to the first and second housings, respectively.

7. (Currently Amended) ~~A swing comprising:~~
~~a swing frame; and~~
~~at least one handle rotationally coupled to the swing frame such that the at least one handle may rotate about a handle rotational axis between at least two positions;~~ The swing of claim 1, wherein the at least two positions including a first position and a second position, the first position being substantially rotated about 180° relative to the second position.

8. (Original) The child swing according to claim 7, wherein the first position is a top position and the second position is a bottom position, the top position being substantially directly above the bottom position.

9-11. (Canceled)

12. (Currently Amended) ~~The child swing of claim 11, A swing comprising:~~
~~a swing frame; and~~
~~at least one handle rotationally coupled to the swing frame such that the at least one handle may rotate about a handle rotational axis between at least two positions, the at least two positions including a first position and a second position, the first position being substantially rotated about 180° relative to the second position.~~

wherein the swing frame comprises at least one handle support structure, the swing handle being rotationally coupled to the frame at the handle support structure, and

wherein one of the ~~one~~ swing handle and the handle support structure includes a protrusion, and the other of the swing handle and the handle support structure includes a recess to receive the protrusion such that, when the swing handle is at the first position and the protrusion is within the recess, the swing handle is locked to prevent rotation relative to the handle support structure.

13. (Currently Amended) ~~The child swing according to claim 11,~~ A swing comprising:

a swing frame; and

at least one handle rotationally coupled to the swing frame such that the at least one handle may rotate about a handle rotational axis between at least two positions, the at least two positions including a first position and a second position, the first position being substantially rotated about 180° relative to the second position,

wherein the swing frame comprises at least one handle support structure, the swing handle being rotationally coupled to the frame at the handle support structure, and

wherein one of the ~~one~~ swing handle and the handle support structure includes a protrusion, and the other of the swing handle and the handle support structure includes a recess to receive the protrusion such that, when the swing handle is at the first position and the protrusion is not within the recess, the swing handle is free to rotate relative to the handle support structure.

14-15. (Canceled)

16. (Currently Amended) ~~The child swing according to claim 15~~ claim 6, wherein the swing frame further includes a rear leg fold mechanism that pivotally connects the first and second ~~rear~~ legs to the first and second housings, respectively.

17-19. (Canceled)

20. (Currently Amended) A swing comprising:
a swing frame including first and second legs, each of the first and second legs including a length adjustment mechanism that allows the respective leg to be adjustable in ~~length, and length;~~
a seat coupled to the swing frame to enable swinging motion of the seat relative to the swing frame; and
a power supply and a motor to drive the swinging motion of the seat.

21. (Original) A swing according to claim 20, wherein the first and second legs are first and second rear legs, and wherein the swing frame further comprises first and second front legs, each of the first and second front legs including a length adjustment mechanism that allows the respective leg to be adjustable in length.

22. (Original) A swing according to claim 20, wherein each leg includes a first portion and a second portion, the first portion configured to slide within the second portion to thereby adjust the length of the leg; and wherein the length adjustment mechanism comprises a biased protrusion on the first portion and multiple holes on the second portion sized to receive the protrusion.

23. (Original) A swing according to claim 20, wherein each leg includes a first portion and a second portion, the first portion configured to slide within the second portion to thereby adjust the length of the leg; and wherein the length adjustment mechanism comprises multiple biased protrusions on the first portion and a hole on the second portion sized to receive the protrusions.

24. (New) The child swing according to claim 2, wherein one of each swing handle and each respective handle support structure includes a protrusion, and the other of each swing handle and each respective handle support structure includes a recess to receive the protrusion such that, when each swing handle is at the first position and the protrusion is not within the recess, each swing handle is free to rotate relative to the respective handle support structure.
